

Milestone 3

Noah Stickel

University of Jamestown

Python

Jessica Schwartz

August 2, 2026

Overview and Scope:

The testing covers the program's ability to accept user input, validate required fields, create attendance records, store multiple records in a list, and display the completed attendance list when the user exits.

Test environment:

Local IDLE (Python 3.14 64-bit)

Test cases:

Test case #	Input	Description	Expected Output
1	n	Exit immediately	Program exists and prints empty list.
2	x	Invalid option	Program displays try again prompt.
3	y, John Smith, 12/Jan/2012, P, n	One successful record added.	Record is successfully added and displayed.
4	y, leave blank, john Smith	Blank name entry.	Program displays blank name entry message.
5	y, john smith, (blank), 12/jan/2012	Blank date entry.	Program displays blank date entry message.
6	y, john smith, 12/jan/2012, x, P	Invalid attendance entry.	Program displays invalid attendance message.
7	y, john smith, 12/jan/2012, p	Auto-conversion of attendance letter.	Program converts entry to capital letter.
8	y, john smith, 12/jan/2012, p, y, john smith, 13/jan/2012, p, n	Two successful entries then closing program.	Two records are successfully added and displayed.
9	y, john smith , 12/jan/2012 , P	Strip spaces from name and date entries.	Spaces are removed from both name and date entries.

Test case #	Status	Actual Result	Notes
1	Pass	Program ended.	
2	Pass	Proper display of error message.	
3	Pass	Record was added and printed correctly.	

4	Pass	Proper display of error message.	
5	Pass	Proper display of error message.	
6	Pass	Proper display of error message.	
7	Pass	Attendance letter was properly capitalized in the record list.	
8	Pass	Both records were added and printed as entered.	
9	Pass	Spaces successfully removed from in front and behind both the name and date entry.	

Findings and Next Steps:

The program works exactly as currently intended. The biggest issue is there is currently no active validation code for date format. In order for this to be fixed, a calendar format system would need to be imported as well as a function for date validation written. Tests that couldn't be run:

- Searching by name.
- Record editing.
- Deleting records.
- Date format validation.

At this time no code changes have been conducted.
